This project is part of an Irish-Japanese interdisciplinary consortium involving academics and industry and cooperating with professional bodies.

The aims of the consortium are central to the ISCA research-based international collaboration programme as well as the mission of UCD and Chiba University.

The cross-disciplinary initiative is well timed and placed to build on current knowledge and achievements in a way which will address human dilemmas concerning robotics-based solutions in care contexts for those wishing to remain in their own home.

ISCA Japan
International
Strategic
Cooperation
Award

Chiba University, Japan
in association with
University College Dublin

Supporting Organisations:

ISCA Japan & Embassy of Japan in Ireland
